

## COMMUNITY UPDATE: September 3, 2009

Our baseline odour testing has been completed and we expect to submit our report to the MOE next week. During the testing process, engineers measured odour directly from our emission sources, ambient odours inside our property line and ambient odours in the community near our facility. For the community ambient odours, our goal was – to the extent possible – to measure odours within 5-10 minutes of receiving a complaint.

Many of the complaints we have received in the past have been very useful in helping us source and address facility emissions. We encourage our neighbours to please continue sending odour and noise complaints directly to our facility as soon as possible. Complaints can help us quickly and effectively source emissions that emanate from our facility.

**Status reports are posted on our website: [www.amaizeinglygreen.com/community](http://www.amaizeinglygreen.com/community).**
