

## COMMUNITY NOTICE: August 14, 2009

In accordance with the Ministry of the Environment (MOE) requirements and our own commitment to open communications with our neighbours, we are providing notification to you that we anticipate re-starting our pellet mill operations on August 17th at 8:00am.

As part of our odour abatement plan and as reviewed by the MOE, we have performed a significant amount of work to turn the pellet mill system into a closed-loop process in order to eliminate emissions (both particulate and odour). Previously, when a pellet was made, it was dropped into a chamber where it was cooled by outside air. The heated air was then expelled to the atmosphere. The new closed-loop system passes heated air from the cooling chamber through a chiller and re-uses it, while particulate is also recycled back into the pelleting process.

Upon startup, we will work to stabilize operations of the pellet mill in order to achieve a steady state of the mill's rated output and quality specifications. Once stabilized, we will evaluate the pellet mill for fugitive odour emissions. We plan to perform the pellet mill's evaluation to coincide with the baseline odour sampling program of the overall facility, which will assess the effectiveness of our odour abatement plan. The baseline odour sampling program is expected to commence during the week of August 17th.

We are very excited about re-starting the pellet mill as it is an important piece of our process that is used to make our Amaizeingly Green natural and ecologically-friendly fertilizer.

AGP continues to follow its complaint response protocols and comply with all MOE orders and notifications. We are committed to being the best neighbour we can be and to improving our environmental footprint.

Status reports are posted on our website: [www.amaizeinglygreen.com/community](http://www.amaizeinglygreen.com/community).
