

COMMUNITY UPDATE: August 25, 2009

Community Liaison Committee

As part of our commitment to building and maintaining an open two-way dialogue with the community, Amaizeingly Green will establish a Community Liaison Committee (CLC). The committee will be an expanded and refocused version of the community-based committee that met during the first two years of the facility's operations. We expect to form this committee and hold its first meeting in September.

The goal of the CLC will be to assist us in our efforts to:

- Assess the ongoing social and environmental impacts of the AGP plant;
- Review and comment on air and noise quality reports, technical studies, social responsibility issues and other matters of interest to the community;
- Identify and address any impacts of the AGP facility operations and to develop measures to monitor and mitigate these impacts; and,
- Examine and comment on site operations, monitoring programs, community engagement and public concerns.

The composition of the committee will include a resident, or residents, of the area immediately surrounding the facility site, representatives of the Town of Collingwood, the Ontario Ministry of the Environment, the local Chamber of Commerce, local business professionals and a representative from Amaizeingly Green.

Abatement Plan Update

The implementation of our odour abatement plan is complete and we have initiated our baseline odour testing program to determine if we achieved what we set out to do in our plan and to determine if further action is required. We expect this baseline odour testing program will be complete by the end of August.

During a portion of the baseline odour testing program, we will suspend the use of Ecolo – an environmentally safe additive to our scrubbers we have been using on a trial basis. While this may result in a temporary change in odours emanating from our facility, ceasing the use of Ecolo is required in order to properly assess the effectiveness of the abatement measures taken and to further refine plant operations as necessary.

The Ecolo product uses only food-grade, edible essential oils similar to those contained in many ecologically-friendly consumer products. AGP is working with HLS Ecolo to optimize the formulation and dose rates to safely target and reduce emissions.

Pellet Mill Operations

We experienced a minor setback in the testing program last Friday (the 21st) when a fan imbalance was discovered in our pellet mill operation. We have shutdown the pellet mill process until this problem is corrected, which we expect to occur by the middle of this week.

Status reports are posted on our website: www.amaizeinglygreen.com/community
